Make your Internet Explorer look better with IE9 Tweaker Official website: studies of the Philadelphia chromosome positive acute lymphoblastic leukemia (ALL) cell line, ALL-HR, have demonstrated that the long terminal repeat (LTR) region of the viral provirus on chromosome 22 is hypermethylated. The proposed experiments will attempt to identify factors responsible for these methylation changes, utilizing the unique and well characterized ALL-HR cell line. The viral gene, c-myb, the gene for which is under the regulatory control of the LTR, will be cloned from the chromosome 22 integrated virus. The c-myb region will then be analyzed for the presence of sequences with homology to known methylation regulatory sequences. To determine if the methylation of the viral LTR is functionally significant, the c-myb and/or the c-myb-LTR will be transfected into murine erythroleukemia cells that are not methylated. The methylation of the transfected cells will be analyzed and the ability of c-myb to suppress LTR methylation will be

determined. The presence of chimeric DNA/RNA transcripts will be examined and if present, transfection of the chimeric DNA/RNA into erythroid progenitors will be attempted. The present invention relates generally to a method and system for facilitating training and retraining of employees and for the assurance of continuity of employees and their responsibilities within an organization. More particularly, the present invention relates to a method and system for storing, retrieving and updating records for an employee for use by training/retraining and record keeping purposes. Employment security and continuity of an organization and its employees is a major concern to employers. In view of the passage of time and changes in economic conditions, a skilled and trained workforce may be lacking in a given organization. Training and retraining of the existing workforce is generally provided by the employer, however, it is desired to be assured that the employee is receiving retraining or up-dating training when it is appropriate. It is well known that various schemes have been implemented to provide for the effective tracking of training of employees. For example, a mechanical mechanism may be implemented for recording the training provided to employees in a time frame. This system, however, requires that the employees be physically present at their training to be recorded. Furthermore, the system is not accessible for providing updated or additional training information.

Overall Review by RALPH 9/12/11 Excellent Tweaker! I love IE9 Tweaker! It allows me to make my IE9 look more like I wanted it to look before I installed it. I even like having the left and right toolbars at the bottom. I love having the menu bar always visible as well. Thank you! Pros Cons Overall Review by RENO 4/27/11 Used to be a good product I still use this product, but it is not as good as it was before. Some things have changed - the control panel is different, the look and feel of the program is different, but the product is still a good one. It is easy to use and to make the changes. It is still the only Windows program that I use for tweaking my IE. It does have a lot of options and I can't really say which one is the best one to choose for the function I need. I have tried 3 or 4 other programs but they didn't have the options this program has. I like this program because it is easy to use and I don't have to try to learn to use this program. I like that it is available online and I don't have to download anything. It is still a good program and I use it all the time. I just wish it would stay the same as it used to be. I like that it is free too. Review by Markus
